

We are subscribers to multiple XM Satellite units in our family and gladly pay for the services they provide, and which we cannot get any other way, especially when we travel. The weather and traffic channels provide us with valuable local information, hours before we get to an area, and well before we could possibly search the dial for a radio station which might or might not provide us with useful information. XM also affords us the opportunity to even stop short of an area experiencing long delays or severe weather and continue our journey when conditions are safer. We respectfully urge you to reject NAB's Petition 04-160 and not censor our ability to receive programming we pay for and deserve.
